North Edge CRM

Competitive Audit & Technology Benchmark Report

Version 4.0 • March 10, 2026

North Edge System • Toronto, Canada • www.northedgesystem.com

Classification: Customer — External Distribution

- Deep code-level CRM capability audit (60K+ backend LOC, 46K+ frontend LOC analysed)
- CRM Module Only — Supply Chain modules excluded from this audit
- Competitive benchmarking against Top 8 CRM platforms
- Technology stack comparison and maturity scoring
- 30 unique differentiators and 7 gap areas identified
- AI capabilities deep-dive: RAG, 3-tier scoring, action orchestration, campaign AI
- Real-time infrastructure audit: SignalR hubs, event broadcasting, presence tracking
- Help Desk with SLA escalation, Visual Workflow Builder, Report Designer (Telerik)

Table of Contents

1. Executive Summary

15. Recommendations

Document Revision History

Version	Date	Author	Changes
1.0	February 11, 2026	Engineering	Initial competitive audit — 35 pages, 160 endpoints, 38 entities, 15 differentiators, 17 gaps
2.0	February 28, 2026	Engineering	Deep code re-audit — corrected to 47 pages, 199 endpoints, 83 entities, 20 differentiators, 15 gaps. Added Marketing & Campaigns (Full), SignalR implementation status, AI deep-dive, Stack Maturity Scorecard
3.0	March 3, 2026	Engineering	Major capability expansion — 53 pages, 254 endpoints, 88 entities, 27 differentiators, 8 gaps. **7 gaps closed**: Email Integration (bidirectional M365/Gmail), Quotes, Price Books, Attachments, Direct Chat, Import Progress. +27K LOC growth. Maturity score 59→72.

4.0	March 10, 2026	Engineering	CRM-only audit (SCM excluded) — 63 page components, 287 CRM endpoints, 67 CRM entities, 30 differentiators, 7 gaps. **Gaps closed**: Visual Workflow Builder (HIGH). **LATER shipped**: Case/Support Ticketing (Help Desk), Report Builder. +12K backend LOC growth. Maturity score 7.7→7.8.

Current version: 4.0 — This document supersedes all previous versions.

---

1. Executive Summary

North Edge CRM is an Angular 21 + .NET 10 Clean Architecture platform with **63 page components**, **48 CRM API controllers (287 endpoints)**, **67 CRM domain entities**, **7+ AI/ML service implementations**, and a comprehensive enterprise CRM suite. The platform features a **full Help Desk with SLA enforcement and escalation**, a **Visual Workflow Builder** with drag-and-drop automation design, and a **Report Designer** powered by Telerik Reports integration. This version audits **CRM modules only** — Supply Chain modules are excluded.

The system features a proprietary CQVS lead scoring framework, a 3-tier AI fallback chain (Azure OpenAI → OpenAI → Rule-based), an AI assistant with RAG knowledge retrieval (Azure AI Search + Foundry Agent), a full Decision Engine with multi-step approval chains and SLA auto-escalation, campaign attribution with explainability, a drag-and-drop dashboard with 18 widget types, bidirectional email integration (M365/Gmail), direct team chat, quote/proposal generation, and enterprise help desk ticketing with queue management and SLA policies.

The CRM backend totals **60,067 lines of C#** and the frontend comprises **~46,406 lines of TypeScript** and **~59,345 lines of SCSS**.

The platform is positioned at **Tier 1 Lower** — the Visual Workflow Builder provides enterprise-grade automation, Case/Support Ticketing delivers sales + service under one platform, and Report Designer provides professional reporting capabilities. Direct competitors are **SugarCRM, Freshsales, Zoho CRM, and HubSpot** (mid-market), with North Edge exceeding all four on workflow automation, AI capabilities, and support ticketing.

---

2. CRM Capability Inventory

> ***Note**: All metrics in this version are CRM-only. Supply Chain modules are excluded from counts. Values in parentheses show change from v3 CRM baseline where applicable.*

Dimension	Count	Detail
Frontend Page Components	**63**	+16 from v3 CRM (help desk pages, workflow designer, report pages, settings)
Routes (lazy-loaded)	**149**	CRM-only routes (v3: ~95 CRM routes)
Backend API Controllers	**48**	+11 from v3 CRM (37 CRM in v3 → 48 CRM now)
API Endpoints	**287**	+51 from v3 CRM (GET 120, POST 103, PUT 30, DELETE 21, PATCH 13)
Domain Entities	**67**	+6 from v3 CRM (61 CRM in v3 → 67 now, includes 7 Help Desk entities)
Application Service Interfaces	**45**	+8 from v3 (5 Help Desk + 2 Workflow + 1 Reports)
Infrastructure Services	**44+**	Including 3 lead scoring + email sync + chat + HelpDesk + Workflow + Reports

Background Workers	**6**	+1 from v3 (HelpDeskSlaEscalationWorker NEW)
AI/ML Implementations	**7+**	Chat/RAG, 3× lead scoring, Foundry, Search, Campaign AI, Email AI
MediatR Handlers	**1**	Hybrid CQRS approach — TenantConnectionStringHandler (per architecture decision)
SignalR Hubs	**2**	PresenceHub + CrmEventsHub (enhanced with help desk events)
Permission Keys (RBAC)	**29**	+6 from v3 (HelpDeskView/Manage/Admin, ReportsView/Manage/Design)
System Roles	**9**	SuperAdmin, Admin, InternalAdmin, ExternalAdmin, SalesManager, SalesRep, MarketingOps, CustomerSuccess, Support
Dashboard Widget Types	**18**	16 cards + 2 charts
Settings Pages	**21+**	Roles, perms, tenants, policies, automation, email, queues, SLA policies
EF Core Configurations	**52**	Entity type configs (same as v3)
Contract DTOs	**170**	+14 from v3 (in 30 subdirectories, +3 new subdirs)
Backend LOC	**60,067**	+12,314 from v3 CRM baseline (+26% growth)
Frontend TS LOC	**~46,406**	+2,782 from v3 CRM baseline (+6% growth)
Frontend SCSS LOC	**~59,345**	+4,020 from v3 CRM baseline (89 SCSS files, +7% growth)

---

3. Feature Maturity Summary

Feature Area	Pages	Maturity	Key Highlights
Dashboard	1 (2,532 LOC)	Full	18 widgets, DnD, AI orchestration, forecast, coaching, manager health
Customers	2	Full	CRUD, bulk actions, CSV import, lifecycle/owner filters, metric cards
Contacts	2	Full	Full CRUD, CSV import, bulk assign/lifecycle, tabbed detail
Leads	3 (2,610 LOC form)	Full	CQVS scoring, 3-tier AI, cadence, conversion, duplicate check, import
Opportunities	7	Full	Stage mgmt, approvals, onboarding, review checklist, team, expansion, quotes
Activities	2	Full	Table/calendar/tasks views, type/status filters, overdue tracking
Decision Engine	5	Full	Inbox, multi-step chains, AI draft, SLA escalation, delegation, audit
Marketing & Campaigns	4 + 13 API	Full	CRUD, attribution with explainability, AI recommendations, health scoring
Email Integration	8 routes	Full	Bidirectional sync M365/Gmail, inbox/sent/drafts/trash/spam, templates, OAuth

Direct Chat	4 routes	Full	Thread-based team messaging, SignalR real-time, typing indicators
Quotes & Proposals	3 routes	Full	Quote generation, versioning, line items, PDF export
Price Books	3 routes	Full	Product catalogs, tiered pricing, date validity
Attachments	3 routes	Full	Multi-entity file upload/download, policy-based access
Help Desk	**4 pages (NEW)**	**Full (NEW)**	**Case mgmt, queues, SLA policies, escalation, email intake, comments**
Visual Workflow Builder	**2 pages (NEW)**	**Full (NEW)**	**Drag-and-drop designer, node palette, properties panel, execution viewer**
Report Designer	**2 pages (NEW)**	**Full (NEW)**	**Telerik Reports integration, report designer, report viewer**
Settings	21+	Full	Users, roles, perms, tenants, automation, qualification, dashboard packs, email, **queues, SLA**
AI Assistant	Integrated	Full	Chat + RAG (AI Search + Foundry), action exec, undo (60s), risk tiers
Auth & Security	4 public pages	Full	JWT, RBAC (29 perms), invite flow, password reset, visibility scopes
Multi-Tenancy	Core infra	Full	Per-tenant policies, provisioning, feature gating, dashboard defaults
Real-Time	2 SignalR hubs	Enhanced	Presence + CRM events + chat + import progress + **help desk escalation**, worker broadcasts
Automation	6 workers	Full	Renewal, SLA escalation, email queue, notification alerts, import progress, **help desk SLA**

4. Unique Differentiators (30)

These are capabilities that most competitors either lack entirely or implement at a basic level:

#	Differentiator	Description
1	CQVS Lead Scoring Framework	Proprietary 6-factor model (Budget, Readiness, Timeline, Problem Severity, Economic Buyer, ICP Fit) with 21 contextual criteria
2	3-Tier AI Lead Scoring	Azure OpenAI → OpenAI → Rule-based automatic fallback. No competitor has multi-provider resilience
3	AI Execution Orchestration	Priority-scored action table with risk/urgency tiers and 60-second undo window on dashboard
4	AI Chat + RAG + Action Execution	Foundry Agent with Azure AI Search grounding, executes CRM actions with risk gating, review workflow, and undo
5	Cost-of-Not-Knowing Metric	Risk-weighted intelligence gap trend — unique KPI measuring data quality cost per deal

6	Truth Metrics Widget	Dashboard widget surfaces data integrity and confidence scoring across the pipeline
7	Confidence-Weighted Pipeline	Trust-scored deal values — no competitor weights pipeline by data quality confidence
8	Decision Engine + SLA Escalation	Multi-step approval chains with background worker auto-escalation, delegation, AI assist drafts
9	Expansion Signal Detection	Automated upsell/cross-sell identification from opportunity patterns with dedicated API
10	Renewal Automation Worker	Background service auto-creates renewal opportunities before contract expiry, runs every 12h
11	Qualification Policy Engine	Per-tenant rules with contextual threshold modifiers per deal type × segment × stage
12	DnD Dashboard (18 widgets)	More widget types than most Tier 2 dashboards with CDK drag-and-drop reordering + chart toggles
13	Manager Pipeline Health View	Coaching-oriented pipeline view with team performance overlay and truth gap detection
14	Priority Stream	Unified cross-entity feed combining leads, opportunities, activities in priority order with filtering
15	Lead Cadence Tracking	Evidence-source tracking with buyer engagement cadence scoring and SLA breach alerts
16	Campaign Attribution + Explainability	First-touch attribution model with evidence trail, candidate listing, and full explainability UI
17	Campaign AI Recommendations	Rule-based recommendations with confidence, impact estimates, evidence, accept/dismiss/snooze workflow
18	Campaign Health Scoring	Composite 0-100 health score with trend tracking, reason chips, and historical snapshots
19	SignalR Real-Time Broadcasting	All 6 workers publish events via SignalR to tenant + user channels; live presence tracking
20	Tenant Feature Gating	Per-tenant module toggle with route-level guard and disabled page
21	Bidirectional Email Sync	Full M365 + Gmail OAuth integration with IMAP operations, inbox/sent/drafts/trash/spam/starred/archive
22	Direct Team Chat	Built-in SignalR-powered team messaging — eliminates need for Slack/Teams integration
23	Quote/Proposal System	Quote generation with versioning, line items, approval workflow, PDF export
24	Price Book Management	Product catalogs with tiered pricing, date validity, opportunity integration
25	Multi-Entity Attachments	File attachments across all entities with policy-based access control
26	Import with Real-Time Progress	CSV import with SignalR-powered progress bars and error reporting
27	Email Templates	Saved email templates with variables for quick personalized outreach
28	**Help Desk with SLA Engine (NEW)**	**Full support ticketing: cases, queues, SLA policies, escalation worker, email intake, comments**

29	**Visual Workflow Builder (NEW)**	**Drag-and-drop automation designer with node palette, properties panel, execution viewer**
30	**Report Designer — Telerik (NEW)**	**Enterprise-grade report designer with built-in Telerik Reports integration and report viewer**

5. Competitive Positioning vs. Top Leaders

Capability	North Edge	Salesforce	HubSpot	Dynamics	Zoho	Freshsales	SugarCR

Mobile	5/10	9/10	9/10	9/10	9/10	9/10	7/10
Real-time Capabilities	8/10	9/10	8/10	9/10	5/10	7/10	3/10
Email Integration	8/10	9/10	9/10	9/10	8/10	8/10	7/10
Average Score	**7.8**	8.6	8.0	8.6	6.5	7.0	5.3

Stack Strengths

- **Angular 21 + PrimeNG 21** — Latest framework version. SugarCRM is still on Backbone (legacy).
- **Clean Architecture (4-layer)** — Architecturally aligned with Dynamics 365.
- **3-Tier AI Fallback (10/10)** — No other CRM has multi-provider AI resilience.
- **Bidirectional Email** — Full M365 + Gmail OAuth with IMAP operations.
- **Real-time Chat** — Built-in team messaging via SignalR.
- **Azure Service Bus** — Same enterprise messaging as Dynamics 365.
- **Visual Workflow Builder** — Drag-and-drop automation on par with Salesforce Flow and Zoho Blueprint.
- **Telerik Reports** — Enterprise-grade reporting engine.
- **Help Desk** — Full support ticketing with SLA escalation.

Stack Gaps

- No SSO/SAML/OAuth2 provider — Blocks enterprise procurement
- No GraphQL or OData — REST-only limits query flexibility
- No native mobile app — Responsive web + Flutter in development
- No plugin/extension system — Can't build marketplace ecosystem

8. Feature Gaps (7)

Remaining gaps after closing Visual Workflow Builder (HIGH) and shipping Help Desk and Report Builder:

Severity	Feature Gap	Details
MEDIUM	Calendar Sync (Google/Outlook)	Internal calendar view exists; no native Google/Outlook sync yet.
MEDIUM	Contract Management	Renewal worker + quotes exist but no formal contract entity/lifecycle workflow.
MEDIUM	Territory Hierarchy	No territory tree structure for regional access control.
MEDIUM	Revenue Forecasting	Confidence-weighted pipeline exists but no formal forecast periods or targets.
LOW	Customer Self-Service Portal	No customer-facing portal for support/orders. Now more relevant with Help Desk in place.
LOW	Full CPQ Configurator	Price lists + quotes exist; product configurator missing.
LOW	Scheduled Reports & Digests	Telerik report infrastructure exists; automated email digests not yet implemented.

Gaps Closed Since v3

Gap	Status	Evidence
Visual Workflow Builder (HIGH)	✅ CLOSED	WorkflowDefinitionService (384 LOC), WorkflowExecutionService (216 LOC), 3 controllers (308 LOC), workflow-designer.page.ts (779 LOC), 3 canvas components

All Gaps Closed Since v2 (Cumulative)

Gap	Closed In	Evidence
Email Integration (Bidirectional)	v3	MailboxSyncService (1,155 LOC), M365+Gmail OAuth
Product & Price Book	v3	PriceListsController (148 LOC) with full CRUD
Quote/Proposal Generation	v3	OpportunityQuotesController (252 LOC) with versioning and PDF
File Attachments	v3	AttachmentsController (254 LOC) with policy-based access
Import Progress Tracking	v3	ImportJobsController + ImportJobRealtimeProgressWorker with SignalR
Notes & Comments	v3	Direct chat threads provide team collaboration
Real-time Team Communication	v3	DirectChatService (389 LOC) with SignalR messaging
Visual Workflow Builder	**v4**	WorkflowDefinitionService (384 LOC), 3 controllers, designer page

9. Dependency Chain (Build Order)

```
→ Calendar Sync → Full Marketing Automation
→ SSO/SAML → Enterprise Customers
→ Webhooks → Third-party Integrations → Plugin Framework
→ Contract Mgmt → Customer Portal
→ Territory Mgmt → Forecasting Engine
→ Mobile App MVP → Native Mobile
```

```
→ Telerik Reports (DONE) → Scheduled Digests → Advanced Analytics
→ Help Desk (DONE) → Customer Portal
→ Workflow Builder (DONE) → Plugin Framework
```

Critical Path: SSO/SAML → Calendar Sync → Webhooks → Mobile App MVP

These 4 features unblock the most downstream work and close the biggest competitive gaps. Visual Workflow Builder, Help Desk, and Report Designer are now complete.

Accelerated Delivery: Two features originally scoped for later phases (Case/Support Ticketing → Help Desk and Workflow Builder) were shipped in v4, de-risking the Customer Portal and Plugin Framework paths.

---

10. Immediate Competitors

Tier	CRMs	Rationale
Tier 1 (Enterprise)	Salesforce, Dynamics 365, Oracle CX	Full platform: marketing automation, CPQ, service, analytics, marketplace
Tier 1 Lower (North Edge)	**North Edge CRM**	**Full CRM + AI + email + chat + quotes + workflow + help desk + reports. Missing SSO + mobile.**
Tier 2 Upper	SugarCRM, Freshsales	Strong CRM but limited AI, no visual workflow builder, weaker reporting
Tier 2 Lower	Zoho, Pipedrive, Monday CRM	Broader ecosystem but weaker on AI/decision engine
Tier 3 (Basic)	Insightly, Capsule, Less Annoying CRM	Basic contact/deal management only

Competitive Position: North Edge now has **workflow builder, help desk, and enterprise reporting** — combined with existing email, quotes, chat, and AI capabilities, this **exceeds SugarCRM, Freshsales, and Zoho on nearly all fronts**. The AI and decision-engine capabilities exceed all Tier 2 competitors. The Help Desk module provides sales + service under one platform — a Tier 1 differentiator. Remaining gaps vs. Tier 1: SSO/SAML, mobile app, marketplace ecosystem.

---

11. Real-Time Capabilities Analysis

North Edge CRM maintains **8/10 on real-time capabilities**. Two SignalR hubs (PresenceHub + CrmEventsHub) are fully implemented, direct team chat with real-time messaging, import progress streaming, **help desk SLA escalation events**, and all 6 background workers publish events via SignalR.

Capability	Current Status	Detail
SignalR Hubs	Implemented (2)	PresenceHub (join/leave broadcast) + CrmEventsHub (tenant/user groups)
Event Publisher	Implemented	SignalRCrmRealtimePublisher — ICrmRealtimePublisher interface, tenant+user scoped
Presence Tracking	Implemented	PresenceHub with user join/leave, online status broadcasting
Worker → Browser Push	Implemented (6)	All 6 workers call PublishTenantEventAsync/PublishUserEventAsync

Push Notifications	Implemented	NotificationAlertWorker pushes SLA breaches, idle deals, coaching alerts
Direct Team Chat	Implemented	Real-time messaging via SignalR with typing indicators
Import Progress	Implemented	CSV import progress streamed to browser via SignalR
Help Desk SLA Events	**Implemented (NEW)**	**HelpDeskSlaEscalationWorker pushes escalation events to tenant channels**
Live record updates	Not yet	No record-level change broadcasting to other viewers
Streaming AI chat	Not yet	Full response wait — not streaming tokens via IAsyncEnumerable
Live dashboard	Partial	Some widgets auto-refresh; full SignalR deltas pending

CRM	Score	Technology
Salesforce	9/10	Streaming API, Platform Events, Pub/Sub API, real-time record locking
Dynamics 365	9/10	SignalR-based real-time updates, Power Automate triggers, live co-authoring
HubSpot	8/10	WebSocket-based live updates, real-time activity feed, live chat
North Edge CRM	**8/10**	**SignalR (2 hubs, chat, import progress, help desk SLA, presence, 6 worker broadcasts)**
Pipedrive	7/10	WebSocket live updates on deals/activities, real-time sync
Freshsales	7/10	WebSocket updates, real-time lead tracking, live chat
Zoho	5/10	Partial real-time via long-polling, Zoho Cliq integration
SugarCRM	3/10	Minimal — mostly polling-based

12. SignalR Implementation Status

The SignalR infrastructure is fully operational and further enhanced. Two hubs handle presence and CRM events. A dedicated publisher (SignalRCrmRealtimePublisher) provides tenant-wide and user-specific broadcasting. All 6 background workers actively push events. Help Desk SLA escalation events are broadcast via SignalR.

Status	Component	Detail
BUILT	PresenceHub	User join/leave broadcasting, online status tracking via groups
BUILT	CrmEventsHub	Tenant-scoped and user-scoped event groups, general broadcasting
BUILT	SignalRCrmRealtimePublisher	ICrmRealtimePublisher impl — PublishTenantEventAsync, PublishUserEventAsync
BUILT	EmailQueueWorker → SignalR	Pushes email delivery status (sent/failed) to tenant + user channels
BUILT	NotificationAlertWorker → SignalR	Pushes SLA breach, idle deal, coaching alerts to user channels
BUILT	DecisionSlaEscalationWorker → SignalR	Pushes escalation events to approver's user channel
BUILT	RenewalAutomationWorker → SignalR	Pushes renewal creation events to opportunity owner's channel

BUILT	ImportJobRealtimeProgressWorker	Pushes CSV import progress to user channel in real-time
BUILT	DirectChatService → SignalR	Real-time message delivery, typing indicators, read receipts
BUILT	**HelpDeskSlaEscalationWorker (NEW)**	**Pushes SLA breach/escalation events to tenant and assignee channels**

13. AI Capabilities Deep-Dive

North Edge CRM has **7+ distinct AI implementations** — more than most Tier 2 competitors and rivaling Tier 1 platforms in several areas. The AI architecture features multi-provider resilience, RAG grounding, action execution with risk-based review, and campaign intelligence.

#	Implementation	LOC	Key Capabilities
1	AssistantChatService	1,080	Foundry Agent with RAG (AI Search), action execution with risk tiering (low=auto, medium/high=review), 60s undo
2	AzureOpenAILeadScoringService	126	Primary AI scorer — structured JSON response with score (0-100), confidence (0-1), reasoning
3	OpenAILeadScoringService	117	Secondary fallback — identical prompt/response schema. Auto-activates when Azure OpenAI unavailable
4	RuleBasedLeadScoringService	33	Tertiary fallback — additive scoring (base 20, max 100), fixed confidence 0.35. Ensures scoring never fails
5	FoundryAgentClient	224	Azure AI Foundry Agents HTTP client with thread-based conversation, polling with rate-limit retry
6	AzureSearchKnowledgeClient	87	RAG retrieval layer — configurable top-k, filter expressions, content truncation
7	MarketingService (AI)	1,232	5 AI recommendation types with confidence, impact estimates, evidence
8	MailboxSyncService (AI)	1,155	Email summarization, thread analysis, suggested responses

AI Architecture Highlights

- **3-Tier Scoring Fallback (10/10 Resilience)** — Azure OpenAI → OpenAI → Rule-based. No other CRM has automatic multi-provider AI failover.
- **Action Risk Tiering** — Low-risk actions auto-execute. Medium/high-risk go to review. Confidence < 0.55 forces review regardless of risk level.
- **60-Second Undo Window** — Every AI-executed action can be undone within 60 seconds. Unique in the CRM market.
- **RAG Grounding** — Azure AI Search retrieves knowledge documents; Foundry Agent uses them for context-aware responses.
- **Campaign Intelligence** — 5 recommendation types with confidence scoring, impact estimates, and evidence.
- **Email AI** — Email summarization and thread analysis for inbox prioritization.

14. New Capabilities Since v3

Help Desk / Support Ticketing (HelpDeskService + HelpDeskController)

Total Backend LOC: 1,743 (HelpDeskService 1,025 + HelpDeskController 553 + HelpDeskSlaEscalationWorker 165)

Feature	Description
Support Cases	Full case lifecycle: create, assign, escalate, resolve, close, reopen
Queue Management	Support queues with member assignment and routing rules
SLA Policies	Configurable SLA targets per queue/priority with breach tracking
SLA Escalation Worker	Background worker monitors SLA compliance, auto-escalates breaches via SignalR
Email Intake	Inbound email to case creation via support email bindings
Case Comments	Threaded comments on cases with internal/external visibility
7 Domain Entities	SupportCase, SupportCaseComment, SupportCaseEscalationEvent, SupportEmailBinding, SupportQueue, SupportQueueMember, SupportSlaPolicy
5 Service Interfaces	ISupportCaseService, ISupportEmailIntakeService, ISupportQueueService, ISupportReportService, ISupportSlaService
3 Permission Keys	HelpDeskView, HelpDeskManage, HelpDeskAdmin
14 API Endpoints	Full CRUD + search + assignment + escalation + reporting
4 Frontend Pages	Case list, case detail, queue management, help desk settings

Visual Workflow Builder (WorkflowDefinitionService + WorkflowExecutionService)

Total Backend LOC: 908 (WorkflowDefinitionService 384 + WorkflowExecutionService 216 + 3 Controllers 308)

Feature	Description
Workflow Designer	Drag-and-drop visual editor for building automation workflows
Node Palette	Library of workflow node types (conditions, actions, triggers)
Properties Panel	Configuration panel for individual workflow nodes
Workflow Canvas	Interactive canvas with node connections and flow visualization
Execution Viewer	Monitor running workflow executions with status tracking
Deal Approval Builder	Specialized builder for deal approval workflow chains
3 Controllers	WorkflowDefinitionsController, WorkflowExecutionsController, DealApprovalWorkflowBuilderController
8 API Endpoints	CRUD + execution management
2 Frontend Pages	Workflow designer (779 LOC) + execution viewer (86 LOC)

Report Designer (Telerik Reports Integration)

Total Backend LOC: 463 (6 Controllers: ReportsController, ReportServerController, ReportDesignerAssetsController, TelerikReportsController, WebReportDesignerController, ReportServerProxyController)

Feature	Description
Report Designer	Visual report designer powered by Telerik Reports
Report Viewer	Interactive report viewer with export options
Report Server Proxy	Proxy layer for Telerik Report Server communication
Designer Assets	Static asset serving for the embedded report designer
3 Permission Keys	ReportsView, ReportsManage, ReportsDesign
9 API Endpoints	Report CRUD + design + rendering + proxy
2 Frontend Pages	Report designer page (74 LOC) + reports page (427 LOC)

System Reference Data

Feature	Description
Currencies	SystemCurrenciesController — standard currency reference data
Phone Types	SystemPhoneTypesController — phone type classification
Time Zones	SystemTimeZonesController — timezone reference for multi-region support

User UI State Persistence

Feature	Description
UI State	UserUiStateController — persist user-specific UI preferences (column widths, sort orders, collapsed sections)
Workspace	WorkspaceController — workspace-level configuration and management

15. Recommendations

Key Strengths

- **Visual Workflow Builder** provides enterprise-grade automation on par with Salesforce Flow and Zoho Blueprint
- **Help Desk with SLA** transforms the platform from sales-only CRM to full sales + service CRM
- **Enterprise reporting** with Telerik Reports provides professional report design capability
- **Email integration** with M365/Gmail OAuth (SugarCRM, Freshsales have no native OAuth)
- **Direct team chat** built-in (eliminates Slack/Teams requirement)
- **AI-first architecture** with 3-tier fallback (no competitor has this resilience)
- **Full quote/proposal system** with price books

Competitive Position

North Edge CRM has **closed 8 major gaps since v2** and delivered critical enterprise capabilities ahead of schedule. The platform now has distinctive advantages that no Tier 2 competitor can match. The Help Desk + AI differentiators form a competitive moat that positions North Edge as **"The AI-first CRM with enterprise-ready sales + service"** — delivering full customer lifecycle management under one platform.

Version Progression Summary

Metric	v2	v3	v4	v2→v4 Growth
CRM Endpoints	199	~236*	**287**	+44%
CRM Entities	83	61*	**67**	—
CRM Controllers	38	37*	**48**	+26%
Differentiators	20	27	**30**	+50%
Feature Gaps	15	8	**7**	−53%
Backend LOC	43,015	~47,753*	**60,067**	+40%
Stack Maturity (avg)	7.3	7.7	**7.8**	+0.5
Platform Tier	Upper Tier 2	Approaching Tier 1	**Tier 1 Lower**	↑↑

*v3 values are CRM-only estimates extracted from combined CRM+SCM totals.
